

## SolarMax Energy Systems

# North Asia Energy Storage Installed Capacity in 2025

智慧能源储能系统  
Intelligent energy storage system

## Overview

---

How big is China's energy storage capacity?

Sign up [here](#). Current installed new energy storage capacity, which is made up mostly of lithium-ion battery storage, was 95 GW as of June, the regulator, the National Energy Administration, said in August. China has raced ahead of its energy storage targets in the past.

Is China entering a new era of energy storage demand?

Mainland China accounts for most of the global energy storage demand, driven in the near term by regional requirements for new utility-scale wind and solar projects to include energy storage capacity. However, the Chinese market is entering an era of change.

Does Cnesa have a role in China's new energy storage capacity?

CNESA's involvement reflects the report's collaborative yet government-led nature, ensuring data integrity and broad sectoral representation. The most notable finding: by the end of 2024, China had reached 73.76 GW / 168 GWh in cumulative new energy storage capacity—an increase of more than 130% year-on-year.

Are storage systems delivering value across multiple use cases?

The report also finds that storage systems are increasingly delivering value across multiple use cases. Independent and shared storage facilities now make up 46% of total capacity, while co-located storage with renewable energy accounts for 42%.

## North Asia Energy Storage Installed Capacity in 2025

### TrendForce: Global Installations Outlook for Energy Storage ...

The United States and emerging markets (Asia, Africa and Latin America) are expected to usher in growth driven by high electricity prices and power shortages and other ...
