

## SolarMax Energy Systems

# Off-island energy storage power station

## Overview

---

Do Island power systems have centrally managed storage facilities?

Centrally managed storage facilities in island power systems dominate the relevant literature. Table 4 includes the papers dealing with the centrally managed storage concept. Table S2 of the Supplementary data and Fig. 7 present additional details for the most representative ones.

How can non-interconnected Island power systems be independent from fossil fuels?

The pathway towards the independence of non-interconnected island (NII) power systems from fossil fuel involves the massive implementation of variable renewable energy sources (RES) .

How important are energy storage stations in Nii?

Undoubtedly, energy storage stations (ESS) are vital for the electricity sector of NII to move to penetrations of renewables over 50 %. As can be inferred from Table 1, pumped hydro storage (PHS) and battery energy storage (BES) technologies dominate the landscape of actual grid-scale applications for island systems.

What are the best storage technologies for Islands?

In , batteries and pumped-hydro storage have been identified as the leading storage technologies for islands, with the former effectively applicable to small and medium size system and the latter to large systems with natural reservoirs.

Is storage an instrument to achieve high-res penetration levels in Islands?

The value of storage as an instrument to achieve high-RES penetration levels in islands is also discussed, reviewing several available articles investigating RES penetrations from approximately 10 % to 100 %. Additionally, the services provided by storage in NIIs systems, and the respective storage

designs available are recognized.

Are pumped-hydro stations a viable storage option for HPS applications?

Up to 2019, the leading storage technology investigated in the literature for HPS applications was the pumped-hydro stations [32, , , , ], which were perceived to be the most suitable and probably the sole economically feasible storage alternative.
