

## SolarMax Energy Systems

# Pack battery factory level

## Overview

---

What is the difference between battery cell production and module & pack production?

Battery cell production is primarily a chemical process, while module and pack production is a mechanical assembly process. Batteries are sometimes called Cells, Modules or Packs. But what does that mean?

What is the difference?

Battery cells are containers that chemically store energy.

What is the difference between battery pack and battery cell?

Battery Cell, Module or Pack. What's the difference?

[Infographics] The manufacturing of battery cells compared to battery packs or modules are two very different industrial processes. Battery cell production is primarily a chemical process, while module and pack production is a mechanical assembly process.

What is battery module and Pack testing?

Battery module and pack testing involves very little testing of the internal chemical reactions of the individual cells. Module and pack tests typically evaluate the overall battery performance, safety, battery management systems (BMS), cooling systems, and internal heating characteristics.

What does a battery pack contain?

The pack usually contains battery cells and/or modules, software (BMS - battery management system) and often a cooling and heating system, depending on where and how the battery pack is to be used. But, hold on, soon, you won't even need to know!.

What is a battery factory?

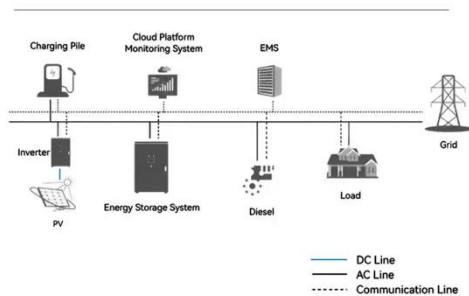

Battery factories assemble the individual battery cells into a functioning battery pack with a battery management system (BMS) and thermal management system (TMS) and enclosure. Some battery pack factories also produce cells onsite, often in a joint partnership with a cell manufacturer (like Panasonic for example). CATL = 37%. China.

How much electricity does a battery factory use?

A large gigafactory can consume 2.4 GWh of electricity and 1 million gallons of water daily. Battery factories assemble the individual battery cells into a functioning battery pack with a battery management system (BMS) and thermal management system (TMS) and enclosure.
