

SolarMax Energy Systems

Panama solar all-in-one home use price

Overview

How much does a solar panel cost?

The panels cost \$345 each and the batteries are \$349 each. The 60 amps controller cost \$670, the INVERTER about \$400 Note: we did use other American made batteries that were cheaper – but eventually they all failed. Also, there are cheaper panels but the ones we buy have a 20 year guarantee.

Do solar panels work if it rains a lot?

Normally, never a problem as the panels bring us back up to 100% around midday. However, during the rainy season you may have consecutive days with little or no sunshine. This year we had almost a week of rain and cloud and for the first time our 4 panels system never fully charged our batteries.

How many Watts Does a basic solar system use?

A basic system will give you about 1,500 to 2,000 watts. What (excuse the pun) does that run?

.

Can I buy a fridge if I have a solar system?

Unless you have a large solar system you will not be able to have a decent sized fridge. A propane gas fridge is wonderful. A Canadian company called UNIQUE can be found on the web. They are more expensive but the one we have can switch from propane to electric. So when you do get city power, its a doddle.

Is solar a good investment?

Firstly, Solar is not a direct replacement for your existing utility company electric supply. For example, if, at the moment, you have several 220 Volt air conditioners that are running day and night, then solar is not for you. If you

think solar will save you bundles of cash in the short term, then you will have to think again.
