

SolarMax Energy Systems

Photovoltaic cell module equipment

Overview

Solar manufacturing encompasses the production of products and materials across the solar value chain. This page provides background information on several manufacturing processes to help you better understand how solar works.

Silicon PV Most commercially available PV modules rely on crystalline silicon as the absorber material. These modules have several manufacturing steps.

The support structures that are built to support PV modules on a roof or in a field are commonly referred to as racking systems. The manufacture of PV.

Power electronics for PV modules, including power optimizers and inverters, are assembled on electronic circuit boards. This hardware converts direct current (DC).

Photovoltaic cell module equipment

Support Customized Product

PV Equipment , Semiconductor Materials and Equipment

Some examples of PV equipment include: Cell production equipment: this includes machines and tools for producing silicon wafers, PV cells, and PV modules. Module assembly equipment:
