

## SolarMax Energy Systems

# Photovoltaic panels to solar panel equipment

## Overview

---

What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations.

What is a solar panel system?

Solar panel systems are often referred to as PV, or photovoltaic, solar power systems. The home installation of a high-quality solar power system can reduce or eliminate dependence on the utility power grid that supplies electricity to light, heat, cool, and operate your home.

How are solar panels used in PV systems?

Solar panels used in PV systems are assemblies of solar cells, typically composed of silicon and commonly mounted in a rigid flat frame. Solar panels are wired together in series to form strings, and strings of solar panels are wired in parallel to form arrays.

What is a photovoltaic (PV) system?

At the heart of it all, a Photovoltaic (PV) system is an eco-friendly powerhouse that converts sunlight into usable electricity, allowing us to power our homes with renewable energy. This system is essentially your private power plant, harnessing the unlimited power of the sun and reducing our reliance on fossil fuels.

What equipment do I need for a solar power system?

Here's our list of recommended equipment for the most common setups if you want to further customize your solar power system. Charge controllers are used to regulate the voltage and current coming from the solar panels to prevent overcharging your battery.

Why do we need a solar PV system?

Design and installation of Solar PV Systems Today our modern world needs energy for various day to day applications such as industrial manufacturing, heating, transport, agricultural, lightning applications, etc. Most of our energy need is usually satisfied by non-renewable sources of energy such as coal, crude oil, natural gas, etc.
