

## SolarMax Energy Systems

# Photovoltaic panels turn yellow

## Overview

---

One of the most noticeable forms of discoloration is the yellowing or browning of the solar panels. This issue occurs due to the degradation of ethyl vinyl acetate (EVA), a material used as an encapsulant in the panel. Initially clear the EVA can turn visibly yellow or even brown over time.

## Photovoltaic panels turn yellow

---

### The lines on the photovoltaic panel surface turn yellow

Hot spots, one of the most common issues with solar systems, occur when areas on a solar panel become overloaded and reach high temperatures relative to the rest of the panel. When current ...

## Yellowing in PV Modules: Causes and Prevention

What is yellowing of PV modules? Yellowing of PV modules refers to the optical degradation of ethyl vinyl acetate (EVA), a material used as an encapsulant on the panel, ...

[Get a quote](#)

## Why do I have Yellow Solar Panels?

The most common reason for yellow

solar panels is because of a chemical reaction causing acetic acid to form. In extremely cheap budget panels, certain chemicals used to clean the ...
