

SolarMax Energy Systems

Polish solar container house BESS

Overview

Is Poland moving towards battery energy storage systems (Bess)?

As expected, Poland's latest capacity market auctions have highlighted a significant shift towards the battery energy storage systems (BESS) beside the fact that the de-rating factor has been significantly decreased.

Does Poland have a potential for energy storage?

With the increasing share of renewables in the Polish power system, it is also necessary to escalate the potential for electricity storage. We at BayWa r.e. are globally active in developing and realising wind, solar, as well as energy storage projects.

Does Poland need 10 GW of Bess?

Radwanska, the country manager for Poland with the German aggregator, said that the head of the Polish transmission system operator has targeted 10 GW of utility-scale BESS "as a priority." Poland's electricity market is larger than that of Belgium and the Netherlands combined, she noted. Rapid saturation.

Is Poland a good place to be for Bess in 2025?

For utility scale BESS in 2025, Poland is the place to be. After the liberalisation of the ancillary services market in June 2024, prices initially fluctuated wildly, but have settled at an attractive level. And battery revenues, for front-of-the-meter installations, are very attractive.

Why do we need a Bess project?

The deployment of new BESS projects will enhance grid stability, support the integration of renewables, and contribute to the long-term resilience of the energy market.
