Power generation grid-connected inverter cabinet

Overview

What is a photovoltaic grid-connected cabinet?

Photovoltaic grid-connected cabinet is a distribution equipment connecting photovoltaic power station and power grid, and is the total outgoing of photovoltaic power station in the photovoltaic power generation system, and its main role is to act as the dividing point between the photovoltaic power generation system and the power grid.

What are grid-connected inverters?

Grid-connected inverters (GCI) are used to feed power from renewable energy distributed generators into the grid*. They are widely used for this purpose. Repetitive control (RC) enables such inverters to inject high quality fundamental-frequency sinusoidal currents into the grid.

What is a grid-connected inverter equivalent model?

Grid-connected inverter equivalent model during normal operation in sequence components. During current limiting, the inverter's fault model is essentially a positive sequence current source with a current of $i \rightarrow L, \text{sat}$ in parallel with the filter capacitor as shown in Fig. 7 (reproduced from) where $i_f = i_{L,\text{sat}}$. Fig. 7.

How can Lt be used in a photovoltaic power generation system?

Fixed installation, large space, good heat dissipation. It can be used in solar photovoltaic power generation systems, and can also be used to convert, distribute and control electrical energy between photovoltaic inverters and transformers or loads.

Power generation grid-connected inverter cabinet
