

SolarMax Energy Systems

Power generation of photovoltaic panels installed in villas in Azerbaijan

CE UN38.3 MSDS

Overview

What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations.

What is a grid-connected photovoltaic (PV) energy estimate?

Estimates the energy production of grid-connected photovoltaic (PV) energy systems throughout the world. It allows homeowners, small building owners, installers and manufacturers to easily develop estimates of the performance of potential PV installations. Operated by the Alliance for Sustainable Energy, LLC.

How are solar panels used in PV systems?

Solar panels used in PV systems are assemblies of solar cells, typically composed of silicon and commonly mounted in a rigid flat frame. Solar panels are wired together in series to form strings, and strings of solar panels are wired in parallel to form arrays.

What are the components of a PV system?

PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations. The basic components of these two configurations of PV systems include solar panels, combiner boxes, inverters, optimizers, and disconnects. Grid-connected PV systems also may include meters, batteries, charge controllers, and battery disconnects.

What are the different types of PV inverters?

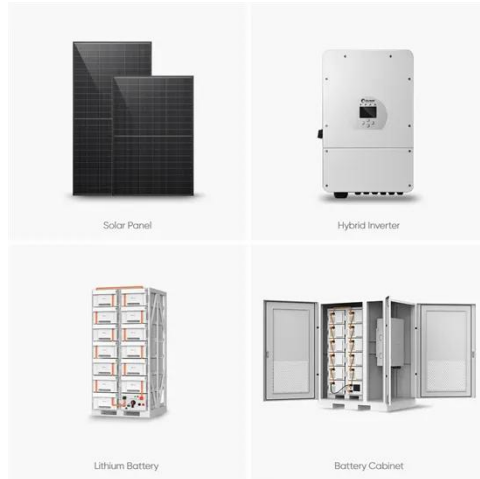

The most common PV inverters are micro-inverters, string inverters, and power optimizers (See Figure 5). Figure 5. Microinverters are connected to each solar panel, which are connected in parallel, and convert DC directly to

AC. String inverters are used with multiple solar panels connected in series.

What is a rated PV system?

The application of the system will determine the system configuration and size. For example, residential grid-connected PV systems are rated less than 20 kW, commercial systems are rated from 20 kW to 1MW, and utility energy-storage systems are rated at more than 1MW. Figure 2.
