

## SolarMax Energy Systems

# Power module in the base station power cabinet

## Overview

---

What is a base station power cabinet?

The base station power cabinet is a key equipment ensuring continuous power supply to base station devices, with LLVD (Load Low Voltage Disconnect) and BLVD (Battery Low Voltage Disconnect) being two important protection mechanisms in the power cabinet.

How many power modules can a triple cabinet power unit have?

A triple cabinet Power Unit can have up to twelve 50 kW Power Modules, providing a maximum nominal power of up to 600 kW. With dynamic power management, the available charging power of all Power Modules is automatically distributed to all connected charging outputs according to the requests of the electric vehicles.

What are kempower power modules?

The Kempower Power Modules are used in Power Unit and Station Charger, to provide 50 kW of charging power each, to Kempower Satellites and other charging outputs, dynamically, in 25 kW increments. Up to 12 Power Modules can be installed in the Kempower Power Unit with three cabinets providing up to 1,200 kW of total charging power.

How many power modules can a kempower station charger have?

The Station Charger can be equipped with up to 8 Power Modules, providing up to 400 kW of total charging power. Kempower Next-Generation Charger Platform with Power Module V2 is available with new Kempower Power Unit in the Satellite charging system, and for Kempower Station Charger orders. The Kempower Power Unit can contain 1 to 12 Power Modules.

What is a kempower power unit?

The Kempower Power Unit is a rack-style, modularly scalable converter cabinet solution that delivers up to 1,200 kW of total charging power in 25 kW

granularity. Connect 1-8, and soon MORE, up to 12 charging plugs, Kempower Satellites or other charging dispensers, to a 600 or 1,200 kW Power Unit.

What is a kempower charging power unit (CPU)?

The heavy-duty, electromechanical design of Kempower Charging Power Units (CPU) consists of control, dynamic, and power modules. Each cabinet utilizes 1 to 4 power modules, each providing a charging power of up to 50 kW. A full CPU provides a maximum power of up to 200/400/600 kW, depending on the CPU version.
