

## SolarMax Energy Systems

# Prefabricated piles for energy storage projects

## Overview

---

What are precast energy piles?

Precast energy piles can be categorized into steel and concrete energy piles based on their material. The heat transfer pipes are installed inside the steel pile foundation. It is well known that the price of steel pile foundations is generally higher than that of concrete pile foundations.

Can precast concrete-driven pile foundations be used as energy piles?

If the precast concrete-driven pile foundations are used as energy piles, this will increase their attractiveness in the projects as an energy source and save a significant portion of the money spent on electricity bills, which is used as the primary source for heating buildings in many countries. Fig. 12.

Can a steel pile be used for high-rise buildings?

The steel piles can be used hollow, but sometimes they are filled with concrete to provide higher bearing capacity for high-rise buildings. However, driven concrete energy piles can be used to provide similar bearing capacity for high-rise buildings. Hence, they can be a competitive alternative to steel driven piles.

What are the benefits of precast driven energy pile foundations?

Another financial benefit of using precast driven energy pile foundations is that it does not require drilling and construction of large boreholes, and the installation of the piles is more straightforward, requiring a lower number of skilled laborers.

Can precast concrete piles be used for deicing roads?

However, the piles in the E18 Bjørvikaprojektet project were not energy piles, but energy piles can be used in such projects, and the harvested heat can be used for deicing roads and sidewalks. Presently there is a relatively large market for precast concrete pile foundations worldwide.

Are driven energy piles a good investment in the construction industry?

Utilizing driven energy piles in the construction industry can save a considerable portion of money on electricity bills and reduce the CO<sub>2</sub> emissions associated with the heating and cooling of buildings. Habibollah Sadeghi: Writing – original draft, Visualization, Investigation.
