## Overview

---

How can phase change materials be used in energy storage and thermal management?

The most effective and easiest way to achieve this is to exploit from phase change materials (PCM) directly or by developing them as a composite. In this context, PCMs are used in various research areas of energy storage and thermal management systems.

Can phase change materials passively store solar energy?

For this purpose, the number of studies on the use of effective phase change materials (PCMs) that have the ability to store/release solar energy in the form of latent heat is increasing. In this short review, general information about PCMs that can passively store thermal energy is presented.

Do phase change materials reduce temperature fluctuations and energy consumption?

The application of phase change materials (PCMs) has also been profoundly researched . PCMs constructively contribute to reducing temperature fluctuations and energy consumption , but they have several disadvantages, including phase segregation, fire safety, and cost .

Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

What is a phase change material (PCM) in latent heat storage?

Thus, the ambient temperature is kept in a temperature range that is very close to the phase change temperature of the substance. Organic and

inorganic chemicals have been used as phase change materials (PCMs) in latent heat storage applications.

What types of solar energy systems use phase change materials?

Due to the intermittent nature of solar radiation, phase change materials are excellent options for use in several types of solar energy systems. This overview of the relevant literature thoroughly discusses the applications of phase change materials, including solar collectors, solar stills, solar ponds, solar air heaters, and solar chimneys.
