

## SolarMax Energy Systems

# Prices of the four major photovoltaic components

## Overview

---

What is included in the quoted price of a solar power system?

The quoted price of a solar power system also includes soft costs that are not evident when looking at a completed installation: permitting, inspections, grid interconnection, taxes, transportation, land acquisition, design work, skilled labor, customer acquisition, overhead, profit margins, etc.

How much does a PV module cost?

The November 2021 technical report considers a PV module cost of \$0.34 per watt, which is equivalent to: As the size of a solar array increases, photovoltaic modules represent a higher percentage of total costs, while the percentage of soft costs decreases.

Where did photovoltaic cost data come from?

Photovoltaic cost data between 1975 and 2003 has been taken from Nemet (2009), between 2004 and 2009 from Farmer & Lafond (2016), and since 2010 from IRENA. Prices from Nemet (2009) and Farmer & Lafond (2016) have been converted to 2024 US\$ using the US GDP deflator, to account for the effects of inflation.

What's happening in the solar photovoltaic industry?

**On-Demand Webinar** This in-depth webinar explores the dynamic transformations occurring within the global solar photovoltaic (PV) industry. As geopolitical factors, trade policies, and manufacturing strategies evolve, the landscape of solar PV production and distribution is undergoing significant change.

How do market analysts evaluate the cost of PV systems?

Market analysts routinely monitor and report the average cost of PV systems and components, but more detail is needed to understand the impact of recent and future technology developments on cost. Consequently,

benchmark systems in the utility-scale, commercial, and residential PV market sectors are evaluated each year.

How many inverters does a PV system use?

The DC cables are connected to 19 utility-scale central inverters, each rated at 4 MW ac, giving the PV system a rated AC power output of 76 MW ac, which corresponds to an inverter loading ratio of 1.32. The inverters are made in Europe in a plant that produces 250 of them each year. These inverters are not subject to import tariffs.
