

## SolarMax Energy Systems

# Prices of various photovoltaic energy storage cabinet solar models

## Overview

---

How efficient is a residential PV system in 2024?

The representative residential PV system (RPV) for 2024 has a rating of 8 kW dc (the sum of the system's module ratings). Each module has an area (with frame) of 1.9 m<sup>2</sup> and a rated power of 400 watts, corresponding to an efficiency of 21.1%.

What is the price range for large solar farms in Germany?

Large solar farms in Germany are now only implemented with module purchase prices below the €0.50 mark. Small systems, which are often equipped with storage technology and energy management, are not as price-sensitive.

Are solar modules still priced above €0.60?

The prices for solar modules available on the market, such as those from SolarWorld or Sonnenstromfabrik, are still trading above the €0.60 mark. Other companies are constantly working to optimize the performance and efficiency of their modules.

Are photovoltaic module prices stagnating?

While module prices for non-EU projects are in the lower 40 eurocent range, prices within the European Union are stagnating just above the 50 eurocent mark.

What is the demand for small PV arrays with storage systems?

There is good demand for small PV arrays with storage systems, and profits are steadily rising in the segment. Although there is good demand for small PV arrays with storage systems, and profits are steadily rising in the segment, this can hardly be called a boom.

Are photovoltaic module prices decreasing?

Recent investigations confirm that the end of photovoltaic module price declines was apparent within the last few months. While the average price level was still slightly decreasing at the start of 2013, compared to December 2012, a trend reversal was already visible at the end of January.
