

## SolarMax Energy Systems

# Production of home photovoltaic energy storage products

## Overview

---

What are photovoltaic systems & energy storage systems?

The energy transition and the desire for greater independence from electricity suppliers are increasingly bringing photovoltaic systems and energy storage systems into focus. Photovoltaic systems convert sunlight into electricity that can be used directly in the household or fed into the public grid.

What is a residential energy storage system?

Residential energy storage systems from Sungrow allow homeowners to maximize renewable solar power, cut power costs, and gain energy independence in power shortage.

How does a photovoltaic system work?

Photovoltaic systems convert sunlight into electricity that can be used directly in the household or fed into the public grid. An energy storage system stores surplus electricity temporarily and releases it again when required. This significantly increases self-consumption and reduces electricity costs.

Does Sungrow offer a residential energy storage system?

Invest in the future with our residential energy storage system from Sungrow. We offer the solar energy storage solution for homes so that homeowners can optimize the advantages of their solar energy systems by using residential battery storage to store extra electricity generated during the day for later use.

What are Viessmann photovoltaic modules & energy storage systems?

Viessmann photovoltaic modules and energy storage systems are not only an efficient way to self-generate and use solar power, but they also integrate seamlessly into the ecosystem. For example, they can be combined with a Viessmann heat pump or charging station for electric vehicles.

## How does a home energy storage system work?

A home energy storage system operates by connecting the solar panels to an inverter, which then links to a battery energy storage system. When needed, the power supplied by the energy storage system is converted through an inverter, from AC to DC or vice versa. The power is then supplied to the power grid or home appliances.
