

## SolarMax Energy Systems

# Profit model of water pump inverter energy storage project

## Overview

---

Is pumped storage hydropower a valuable energy storage resource?

March 2021 While there is a general understanding that pumped storage hydropower (PSH) is a valuable energy storage resource that provides many services and benefits for the operation of power systems, determining the value of PSH plants and their various services and contributions has been a challenge.

How many pumped storage hydropower projects have been built?

Since 2000 only one new pumped storage hydropower project has been constructed in the United States. In order to increase the future opportunity for pumped storage development, reductions in cost and scale are necessary.

How can pumped storage hydropower operations maximise profit?

In a highly volatile market, there is a great possibility to yield large amounts of profit. However, to fully maximise profit, especially in a low volatility market, constant optimisation of pumped storage hydropower operations through advanced forecasting and modelling is crucial. Teknisk-naturvetenskapliga fakulteten, Uppsala universitet.

How to assess the profitability of pumped storage hydropower plants?

To assess the profitability, an investment analysis tool for pumped storage hydropower plants was created in MathWork's MATLAB, focusing on one of Fortum's already existing pumped storage hydropower plants. The investment analysis tool was built for several cases with fixed operating schedules using a weekly timeframe.

Does market volatility affect the profitability of pumped storage hydropower projects?

The results obtained from the investment analysis tool indicated that market volatility plays a crucial role in determining the profitability of pumped storage

hydropower projects. In a highly volatile market, there is a great possibility to yield large amounts of profit.

Who selected Pumped storage hydropower projects?

The project team collaborated with Absaroka Energy and Rye Development, whose proposed pumped storage hydropower (PSH) projects (Banner Mountain by Absaroka Energy and Goldendale by Rye Development and Copenhagen Infrastructure Partners) were selected by DOE WPTO through the Notice of Opportunity for Technical Assistance (NOTA) process.
