Rectifier module for grid-connected inverter of communication base station

Overview

B. Rectification module: High frequency switch rectifier, also known as no power frequency transformer rectifier, is a power module that converts AC input into DC output. In communication power supplies, also known as switch rectifiers, they generally provide DC power with a voltage of -48V.

Rectifier module for grid-connected inverter of communication base

Rectifier Module System

EverExceed rectifier module system is convenient for flexible expansion and provides enough power to meet the requirements of communication systems. It is suitable for power grids such ...
