

## SolarMax Energy Systems

# Remote BMS Battery Management System

**2MW / 5MWh**  
**Customizable**

## Overview

---

Why do we need a battery management system (BMS)?

Thus, BMS significantly enable for safety protection and reliable battery management by performing of monitoring charge control, state evaluation, reporting the data and functionalities cell balancing.

What is a wireless battery management system (BMS)?

A wireless battery management system (BMS) from Dukosi is a system that puts a chip and embedded software on each battery cell to enable 'edge intelligence' for safer and better performance batteries. This shift towards electrification, especially with electric vehicles, makes battery monitoring critical for safety and lifetime performance.

What are the components of a battery management system (BMS)?

A typical BMS consists of: Battery Management Controller (BMC): The brain of the BMS, processing real-time data. Voltage and Current Sensors: Measures cell voltage and current. Temperature Sensors: Monitor heat variations. Balancing Circuit: Ensures uniform charge distribution. Power Supply Unit: Provides energy to the BMS components.

What is Orion BMS connect?

The Orion BMS Connect is an internet based remote monitoring system that enables monitoring battery packs through a web browser, smartphone, or tablet. Instant data, charts of recent history, and diagnostic information including recent events, fault codes, and freeze frame data are available.

What makes a good battery management system?

A BMS must be designed for specific battery chemistries such as: 02. Power Consumption: An efficient BMS should consume minimal power to prevent draining the battery unnecessarily. 03. Scalability: For large-scale applications (EVs, grid storage), a scalable BMS is essential.

How will BMS technology change the future of battery management?

As the demand for electric vehicles (EVs), energy storage systems (ESS), and renewable energy solutions grows, BMS technology will continue evolving. The integration of AI, IoT, and smart-grid connectivity will shape the next generation of battery management systems, making them more efficient, reliable, and intelligent.
