Requirements for base stations of communication facilities

Overview

The subpart prescribes general operating requirements for stations licensed under this part. This includes station operating procedures, points of communication, permissible communications, methods of station identification, control requirements, and station record keeping requirements. Why are base stations important in cellular communication?

Base stations are important in the cellular communication as it facilitate seamless communication between mobile devices and the network communication. The demand for efficient data transmission are increased as we are advancing towards new technologies such as 5G and other data intensive applications.

What are the rules governing the use of radio stations?

§ 80.86 International regulations applicable. In addition to being regulated by these rules, the use and operation of stations subject to this part are governed by the Radio Regulations and the radio provisions of all other international agreements in force to which the United States is a party. § 80.87 Cooperative use of frequency assignments.

What are the requirements for a radio station inspection?

§ 80.61 Commission inspection of stations. All stations and required station records must be made available for inspection by authorized representatives of the Commission. § 80.63 Maintenance of transmitter power. (a) The power of each radio transmitter must not be more than that necessary to carry on the service for which the station is licensed.

What are the components of a base station?

Power Supply: The power source provides the electrical energy to base station elements. It often features auxiliary power supply mechanisms that guarantee operation in case of lost or interrupted electricity, during blackouts. **Baseband Processor:** The baseband processor is responsible for the processing of the digital signals.

What are the different types of base stations?

Some basic types of base stations are as follows: Macro-base stations are tall towers ranging from 50 to 200 feet in height, placed at strategic locations to provide maximum coverage in a given area. Those are equipped with large towers and antennas that transmit and receive radio signals from wireless devices.

What are the telephony requirements for a ship station?

Hand-held portable transmitters must be capable of reducing power to one watt, but need not do so automatically. § 80.81 Antenna requirements for ship stations. All telephony emissions of a ship station or a marine utility station on board ship within the frequency band 30-200 MHz must be vertically polarized.
