

SolarMax Energy Systems

Russian distribution room energy storage equipment

Overview

Are distributed energy resources a problem in Russia?

Distributed energy resources are currently ignored in the long-term planning for Russian power system development, except in remote and isolated areas. Despite this, some changes are taking place in the country, albeit rather slowly.

Should Russia create an infrastructure for EV charging stations?

Russia must also “create an infrastructure for charging stations” for EVs, he said. Rosatom announced on November 23 that it had established a new subsidiary — Renera — dedicated to the manufacture of energy storage systems.

What is distributed generation (DG) in Russia?

Distributed Generation (DG), unlike other types of distributed energy resource, is applied to some extent in Russia. In Russia, power plants with a larger capacity than is common in Europe or the United States are classified as DG.

What is the capacity of distributed generation in Russia?

Table 1. Typical cases of distributed generation in Russia Capacity of 25-600 MW Technology – steam power (for stations launched in the XX century) and gas or reciprocated gas turbine (XXI century). Most often - co-generation. Capacity - usually from 500 kW to 10 MW. The technology - mainly reciprocated gas turbine, less often micro-turbine.

What are the types of distributed generation in Russia?

Typical cases of distributed generation in Russia Capacity of 25-600 MW Technology – steam power (for stations launched in the XX century) and gas or reciprocated gas turbine (XXI century). Most often - co-generation. Capacity - usually from 500 kW to 10 MW. The technology - mainly reciprocated gas turbine, less often micro-turbine. eration.

Is distributed co-generation a good idea in Russia?

At the same time, the most promising approach in Russia is distributed co-generation (a technology that shows a high level of efficiency in the northern countries of Europe). According to the most conservative estimates, its potential is about 17 GW.
