

**SolarMax Energy Systems**

# **Rwanda Energy Storage Power Station**

## Overview

---

How is the electricity system managed in Rwanda?

The entire grid system is being managed using the Supervisory control and data acquisition (SCADA) system. To date, 51% Rwandan households have access to electricity, connected to the national grid (37%) or through off-grid systems (14%).

How much power does Rwanda have?

The country is in the midst of a rapid expansion of its electrical grid, and many new plants are proposed or under construction. Rwanda planned to expand its grid power up to 556 MW in 2024. As of December 2022, the national installed generation capacity totaled 276.068 megawatts, with peak demand of 140.6MW.

What voltages are in Rwanda's Electricity Grid?

Rwanda's Electricity Grid System is divided into High Voltage - HV (110kV and 220kV) Medium Voltage MV (15kV and 30kV) and Low Voltage-LV (0.4kV) Rwanda is being interconnected to the region through the 220kV backbone; plans are underway to introduce a 400kV once the regional power trading has been effected.

How many hydropower plants are there in Rwanda?

Hydropower makes up approx. 47% of the total installed capacity. Hydro power plants are either publicly owned and operated, leased to private companies, or privately owned (IPP). Mini and Small Hydropower Currently, 11 micro hydropower plants MW exist in Rwanda as isolated networks.

Does Rwanda need a methane-to-power project?

Rwanda wishes to utilize this resource to develop methane-to-power projects and other uses such as fertilizer and industrial use. The Methane in Lake Kivu is estimated to be sufficient to generate 700 MW of electricity over a period of

55 years. Rwanda's share of the total generation potential is about 350 MW, with the rest being DRC's share.

How much electricity can Rwanda generate from Lake Kivu?

The Methane in Lake Kivu is estimated to be sufficient to generate 700 MW of electricity over a period of 55 years. Rwanda's share of the total generation potential is about 350 MW, with the rest being DRC's share. It has the capacity to generate 120 million to 150 million m<sup>3</sup> of CH<sub>4</sub> per annum, representing a power potential of 90 to 130 MW.
