

## SolarMax Energy Systems

# Semi-solid lithium flow battery

## Overview

---

A semi-solid flow battery is a type of flow battery using solid battery active materials or involving solid species in the energy carrying fluid. A research team in MIT proposed this concept using lithium-ion battery materials. In such a system, both positive (cathode) and negative electrode (anode) consist of.

Two different flow modes were explored, intermittent flow mode and continuous flow mode. In an intermittent flow mode, suspensions are pumped into the electrochemical.

**Solid Dispersion Flow Battery** Despite the significant advantage of such a system, one key limitation was the high viscosity, which makes the power consumption for.

### **Recent Progress of Lithium-based Semi-solid Flow Batteries**

Recently, tremendous research efforts have been made to design lithium-based SSFBs(Li-SSFBs). In this review, the working principle and characteristics of Li-SSFBs are presented.
