

SolarMax Energy Systems

Senegal 5G flywheel energy storage construction project bidding

Overview

Is a solar energy project in Senegal the biggest in West Africa?

Work on a solar energy and battery storage project in Senegal, touted to be the biggest in West Africa once it goes live, is set to begin next month after an EPC (Engineering, Procurement and Construction) contract for its development was recently signed. The Kolda project will encompass a 60MWp PV solar plant coupled with a 90MWh storage system.

How will the energy system work in Senegal?

The system will utilise reserve energy when there are deficits, bring power and grid assets online after failures, and supply electricity to the cities in the northern part of Senegal during power outages.

How will eaif support Senegal's Clean Power Project?

EAIF acted as co-lender alongside the Dutch development bank FMO, to support the development of the €42m landmark project. A Euro equivalent US\$1.5m capital grant extended by PIDG Technical Assistance will ensure the project is designed to maximise supply of clean power to Senegal's grid, whilst remaining economically viable.

When will a solar power plant be built in Senegal?

"This agreement paves the way for the construction to begin in May 2025, with the deployment of a 60MWp photovoltaic plant coupled with a 90MWh storage system." Voltaia is to supply the PV infrastructure for the solar power plant, which will operate on Senegal's national grid managed by SENELEC.

When will a battery energy storage system start in Senegal?

Construction of the battery energy storage system is expected to commence in early 2024 at the Tobène substation in Thies and is expected to become operational in 2025. Once complete, it will be one of the largest of its kind in West Africa, and will help Senegal to avoid approximately 37,000 tonnes of

carbon dioxide emissions each year.

Is Senegal achieving universal energy access?

With a national electricity access rate of 84%, Senegal is making progress towards universal energy access, yet more than 30% of rural communities remain disconnected from the grid.
