Senegal Yuanxian Solar Photovoltaic Panels

Overview

Will two solar plants be built in Senegal's southern Casamance region?

DAKAR, Nov 13 (Reuters) - Two solar plants with a combined 60 megawatts (MW) capacity and battery storage will be built in Senegal's southern Casamance region to electrify rural areas, Africa-based project developer Axian Energy said on Wednesday.

Does Senegal have a solar energy sector?

Senegal's energy sector is increasingly reliant on solar power, making it essential to assess its long-term viability under changing climate conditions. This study evaluates future solar energy production in Senegal up to 2050, focusing on eight operational solar plants: Bokhol, Sakal, Malicounda, Kahone, Ten Merina, Mekhe, Ndiass, and Kael.

Where are solar plants located in Senegal?

This study focuses on eight (8) solar plants, mainly located in western Senegal (Bokhol, Sakal, Malicounda, Kahone, Ten Merina, Mekhe, Ndiass, and Kael), with particular emphasis on Ten Merina, where the observation data used were collected. Ten Merina is located in the department of Tivaoune, the region of Thies (the second most populated region).

Do solar power plants in Senegal vary over time?

They found that Senegal experiences significant variability in solar resources over time and across different locations, depending on the year and specific site conditions. Niang et al. (2023) evaluated the seasonal performance of six solar power plants in Senegal, namely Bokhol, Sakal, Malicounda, Kahone, Ten Merina, and Mekhe.

Why should Senegal invest in solar power plants?

Solar power plants in Senegal form part of the strategy for increasing access to electricity, focusing on regenerative sources. Senegal's government wants

to become an emerging economy by 2035 and the energy sector is one of the major components of Senegal's growth. Rural areas remain the most challenging areas to install power grids.

Is there a bias correction for solar energy production in Senegal?

Despite the higher resolution and detailed regional climate information provided by the CORDEX-CORE datasets, biases are noticed. These results suggest a bias correction to better estimate the future changes in solar energy production in Senegal. A bias correction is performed using the method described in Eq. 5 (Fig. 4b).
