Serbia s Ground-Mounted Power Plant Energy Storage Policy

Overview

Who will install a solar power plant in Serbia?

Mid last year, the government embarked on a lookout for strategic partners who would install the facilities, including 1,000 MWac (1,200 MWdc) of solar plants and at least 200 MW of battery storage. The facilities will be handed over to state-owned power utility Elektroprivreda Srbije (EPS), which acts as a sole owner and investor.

Will Serbia develop a large-scale solar plant?

The Serbian government has called for the development of a spatial plan for six large-scale solar plants with a cumulative capacity of 1 GW that will be colocated with two-hour battery energy storage systems with a power output of at least 200 MW.

How will Serbia implement the energy transition?

Serbia plans to build solar power plants, wind farms, and pumped-storage hydropower plants, but also gas-fired power plants, energy storage batteries, and hydrogen facilities, in order to implement the energy transition. Coal-fired power plants would be closed by 2050, but not before there is enough green power capacity to replace them.

When will solar & battery facilities be delivered in Serbia?

The solar and battery facilities shall be delivered by June 1, 2028. Government representatives were quoted earlier this year saying that construction could start already in 2024. According to the Association of Renewable Energy Sources of Serbia, the country has installed around 95 MW of solar.

How many renewable power plants does Serbia need?

In order to replace all of its coal-fired plants, with a combined installed capacity of 4,400 MW, Serbia needs to build 8,000-10,000 MW of wind, solar, and hydro power plants. However, to reach the greenhouse gas emissions

target by 2050, it is necessary to build a total of 21,000-22,000 MW of renewable capacity, the document reads.

Does Serbia need a coal power plant?

The ministry believes that until full decarbonization and coal phaseout are achieved, the operation of coal power plants only makes sense if coal of required quality is used. In order to replace all of its coal-fired plants, with a combined installed capacity of 4,400 MW, Serbia needs to build 8,000-10,000 MW of wind, solar, and hydro power plants.
