

## SolarMax Energy Systems

# Single-phase photovoltaic inverter and three-phase photovoltaic inverter

## Overview

---

In this article, we will explain what they are and talk about the differences between single-phase inverter and three-phase inverter. A single-phase inverter is fairly obvious. It converts the DC power generated by your solar panels into a single phase of AC power that you can use.

Here are the main differences between the two: Single-Phase Inverter They are typically used in most new houses and small businesses, single-phase.

First, you can check your switchboard. If the main switch is one-pole wide, then your home is connected to a single-phase power supply. If the main switch is 3 poles.

If your property has single-phase power, then you will also need to ensure you install a single-phase inverter. In most states, if your property is single-phase.
