

**SolarMax Energy Systems**

# **Solar Base Station Battery Distribution in the Netherlands**

## Overview

---

Are battery energy storage installations limiting the deployment of battery energy systems?

While lengthy authorization processes are limiting the deployment of battery energy storage installations (BESS), the lion's share of purchased battery systems is in the residential sector. In fact, the paper shows that 98% of the Dutch installations are small ones (less than 20 kWh).

What is a battery energy storage system (BESS)?

The battery energy storage system (BESS) has an installed capacity of 7.5 megawatts (MW) and a storage capacity of 11 megawatt hours (MWh). Highly responsive control technology and inverters with grid-forming functionality enable the system to supply or absorb power within milliseconds, helping to stabilise the electricity grid.

Why should battery energy storage systems (BESS) be transformed?

This transformation presents both opportunities and challenges for Battery Energy Storage Systems (BESS). These systems are crucial for managing fluctuations in energy supply and demand, providing benefits like grid stability and financial potential.

How many lithium-ion battery racks will be installed at RWE's Eemshaven power plant?

A total of 110 lithium-ion battery racks will be installed at RWE's Eemshaven power plant on an area of around 3,000 square metres. The storage system is planned to supply control energy and to operate in wholesale markets as of 2025.

How many EVs can a battery storage facility charge?

The battery storage facility will be able to operate at its installed capacity of 35 MW for over an hour. Theoretically, this is sufficient to charge around 800

EVs. The system has been designed to be virtually coupled across technologies with RWE power plants in the Netherlands.
