

SolarMax Energy Systems

Solar Panel Factory Statistics

Overview

Domestic module manufacturing capacity grew an unprecedented 190% year-over-year, from just 14.5 GW at the end of 2023 to 42.1 GW at the end of 2024 and surpassed 50 GW in early 2025. This manufacturing is largely concentrated in the South, with 8.6 GW of capacity in Texas and 8.4 GW in Georgia. How many solar panels are installed in the US?

3.2 million US homes have solar panels installed. 3,975,096 people are employed in the solar industry worldwide, and 263,883 of these are in the United States. The solar energy industry created more new jobs in the US than any other energy subsector last year.

How many people are employed in the solar industry?

3,975,096 people are employed in the solar industry worldwide, and 263,883 of these are in the United States. The solar energy industry created more new jobs in the US than any other energy subsector last year. It would take around 18.5 billion solar panels to produce enough energy to power the entire US.

How much sunlight can a solar panel produce?

Today's modern solar panels can convert up to 22% of sunlight into usable energy. Solar energy is the most abundant energy source in the world. According to the US Department of Energy, just 1.5 hours of sunlight reaching the Earth's surface could power the entire world's energy needs for a full year.

How many solar panels are there in the UK?

In the UK, the solar energy capacity has risen from 95 megawatts in 2010 to 18 GW; that's an astonishing 18,847% increase. In February 2025, the UK saw 1,735,000 solar panel installations. A decade ago, in 2015, there were just 839,879 solar energy installations, according to Statistica.

How many solar panels are installed in the UK in 2024?

In 2024, 72% of all new solar photovoltaic (PV) capacity installed globally came from Asian countries. As of February 2025, 18.0 GW of solar energy is used in the UK. In 2025, the UK saw 1,735,000 solar panel installations (most of which were domestic) which was a 6.8% increase from the previous year.

How many solar panels would it take to power the US?

It would take around 18.5 billion solar panels to power the entire US in 2025. In a 2017 NGA meeting, Elon Musk famously said that it would be possible to power the entire US by covering one small 100x100 mile square corner of Texas with solar panels.
