

SolarMax Energy Systems

Solar Photovoltaic Compact On-site Energy

Overview

What is photovoltaic solar energy?

Photovoltaic solar energy meets the challenges of decarbonization, optimizing energy costs and increasing energy independence.

Is solar photovoltaic electricity a viable energy source?

The cost of solar photovoltaic electricity has been divided by 10 in the last 12 years, making it one of the most competitive energy sources in the world today. It is now possible to dispose one's own autonomous energy ecosystems that can continuously meet up to 100% of one's own electricity needs.

Is rooftop solar a good option for a building?

Rooftop solar remains one of the most accessible and cost-effective ways to generate on-site power, particularly for facilities with high daytime energy usage. These systems can typically offset a large portion of energy consumption in a building and are relatively simple to install.

How much electricity does a photovoltaic company need?

There is no specific requirement for the size of a company and the amount of electricity purchased for onsite PPAs with photovoltaics. Sensible contracts start at a supply volume of 50,000 to 100,000 kWh per year. Companies in the commercial and industrial sector should also ideally have free space of several 100 square meters.

Are there standard products for onsite PPAs with photovoltaics?

For onsite PPAs with photovoltaics, as we offer them, there are basically no standard products. The technical components as well as the contract details are always planned individually and optimized for the customer's needs. That is why we attach great importance to comprehensive consulting and technical support.

Solar Photovoltaic Compact On-site Energy

Solar Photovoltaic Power Plant , PV plants Explained

A solar photovoltaic (PV) power plant is an innovative energy solution that converts sunlight into electricity using the photovoltaic effect. This ...
