

SolarMax Energy Systems

**Solar energy 18 times the price
of on-site energy**

Overview

How much does a residential solar system cost?

Using these numbers, an average-sized 8-kilowatt residential solar system would cost between \$21,900 – \$26,400. Regional pricing differences, the system size, local installation costs, inclusion of home battery backup, and local incentives are other factors which affect the final cost.

How much does solar cost a year?

If solar cuts \$150 off your monthly bill, that's \$1,800 a year. Add another \$200 in credits for power you export, and your annual savings is \$2,000. Payback period is simply the system cost divided by annual savings. Using the numbers above: $\$12,000 \div \$2,000 = 6$ years. That means in six years your system has paid for itself.

How much does solar cost per kilowatt-hour?

The best way to measure such costs is called the levelized cost of electricity, which is essentially the lifetime cost per unit of electricity generated. The global weighted average LCOE stabilized at \$0.043 per kilowatt-hour for utility-scale solar PV. This made solar 41% cheaper than the least-cost fossil fuel option.

How much does it cost to install solar panels?

Although the overall cost of installing solar panels can surpass \$20,000, you may not have to cover the entire cost. Depending on where you live, you may be able to access federal, state, and local government programs:.

How has solar power changed over time?

Both are measured on logarithmic scales, and the trend follows a straight line. That means the fall in cost has been exponential. Costs have fallen by around 20% every time the global cumulative capacity doubles. Over four decades, solar power has transformed from one of the most expensive electricity

sources to the cheapest in many countries.

What is NREL's solar-plus-storage cost benchmarking work?

This work has grown to include cost models for solar-plus-storage systems. NREL's PV cost benchmarking work uses a bottom-up approach. First, analysts create a set of steps required for system installation.

Solar energy 18 times the price of on-site energy

Solar Installed System Cost Analysis

NREL's bottom-up cost modeling methodology, shown here for residential PV systems, considers a wide set of factors and many interactions between them. These bottom ...
