Solar panels failed

Overview

What happens if a solar panel fails?

This means the electrical output of the solar panel will remain above 90% of its rated power output for 10 years and remain above 80% of the original rated power output for 25 years in total. If a component has failed the customer is to pay for return shipping to Uneek LEDs.

How do I know if my solar panel is failing?

Identifying a failing solar panel isn't rocket science. Uneven color, cracks, or production dips are some of the signs which may show that your solar panel is underperforming. I advise regular monitoring to catch these signs early on.

What are common solar panel problems?

In conclusion, being aware of common solar panel problems such as dust accumulation, shading, and microcracks can help system owners take timely action. Regular maintenance, professional inspections, and addressing potential defects will maximize solar panel efficiency. For more informative solar content, keep reading our blogs.
