

SolarMax Energy Systems

Solar power generation household electricity bill

Overview

Your electricity bill with solar panels depends on a few factors, including the size of your system, electricity consumption, net metering policy, and the time of year. In many cases, solar systems can be designed.

Will I still have an electric bill after going solar?

You will probably still have an electric utility bill after going solar. Most homeowners need power from the grid at night and when their panels aren't producing enough electricity. The average monthly residential electric bill is \$136.84 for 855 kilowatt hours, according to the Department of Energy.

How much will my electric bill be after installing solar panels?

The size of your electric bill after installing solar panels depends on your specific situation. Every state has its own regulations, utilities offer different rates and options, and each home is unique.

How much will a solar system save on my electric bill?

How much you will save on your electric bill with solar depends on seven key factors: Whether your solar system is sized to cover all of your electricity consumption. How many hours of sunlight your home gets. How much your solar panels cost. Whether you leased your solar system, got a loan or paid cash for it.

Do solar panels affect my electric bill?

Yes, either before or after the solar panels are installed and producing clean energy, you will still get an electric bill. If your solar production balances and replaces the cost of purchasing grid power from your utility, the remaining amount paid on your monthly bills will be substantially decreased, if not negative.

What is a monthly electric bill?

Monthly electric bill = Cost of grid electricity imports - value of solar exports
So, let's say you have 1:1 net metering, a solar system sized to produce 100%

of your average electricity consumption, and a utility rate of 17 cents per kWh. For the month of June, your consumption and production might look something like the graphic below:.

Can I reduce my electric bill if I go solar?

Ideally, you'll be able to eliminate your electric bill charges after going solar. You may even see some negative bills if you can carry over net metering credits month-to-month. But, as we've explained, this might not be possible if you don't have a great net metering policy, or if you can't install a large enough solar panel system.
