Solar power home price trends

Overview

Analyzing millions of transaction-level data points from homeowners on EnergySage, it highlighted a clear milestone for solar panels: The average price had dropped 30% year-over-year in 2024. Are residential solar prices falling?

Residential solar prices are falling lower than ever before, said marketplace operator EnergySage in its biannual solar and storage marketplace report. The median quoted price on its platform reached \$2.50 per watt in the second half of 2024, falling 6.4% from the first half of 2024.

How much does a solar panel cost?

Today's premium monocrystalline solar panels typically cost between 30 and 50 cents per Watt, putting the price of a single 400-watt solar panel between \$120 to \$200, depending on how you buy it. Less efficient polycrystalline panels are typically cheaper at \$0.25 per Watt. The cost of a solar panel also depends on how you buy it.

Did solar panel prices hit an All-Time Low in 2024?

EnergySage has released its 20th semiannual report, showing that residential solar panel prices hit an all-time low in 2024. Analyzing millions of transaction-level data points from homeowners on EnergySage, it highlighted a clear milestone for solar panels: The average price had dropped 30% year-over-year in 2024.

Do solar panels increase home values?

In the 2024 report, 31% of agents said they perceived solar to increase home values in their markets. Brett Johnson, owner of New Era Home Buyers, agrees. "I have noticed a trend where the presence of solar panels can greatly impact the sale of a home," Johnson says.

How much do Solar Homes sell for?

On average, across the United States, homes with solar sell for 6.9% more than homes without solar. The sale price increases by about \$25,000 for a home with solar. Four out of the 36 states in our study saw an increase of less than 2% on homes with solar. In one state (Alabama), non-solar homes sold for about 5% more than comparable solar homes.

Are home solar panels getting more powerful?

Home solar panels are getting more powerful, faster. In H2 2023, 81% of quotes included panels rated under 400 watts. By H2 2024, that number had dropped to just 14%. The shift is thanks to advances in panel efficiency and design: Either the panels themselves are getting bigger, or they're packing more power into the same space.
