

SolarMax Energy Systems

South Africa s new energy skytrain station

Overview

What is South Africa's first self-build main transmission substation?

South Africa's first self-build Main Transmission Substation (MTS), by an Independent Power Producer (IPP), has been completed and energised on 5 April 2025. The Koruson 400/132 kV MTS outside Noupoot in the Northern Cape, has been designed and constructed to connect 1.5 GW of renewable energy to the national grid.

What does Eskom's renewables push mean for South Africa?

These developments are a portion of Eskom's renewables push, a commitment to investing R106 billion towards renewable energy projects by 2030. The drive is adapted to South Africa's Integrated Resource Plan that aims to reduce reliance on coal and embrace clean energy sources.

What is the Eskom Just Energy Transition Project?

The Eskom Just Energy Transition Project (EJETP) is a \$497 million project approved by the World Bank Group in November 2022 at the request of the Government of South Africa.

Will South Africa develop a solar photovoltaic power plant?

In a critical step forward for South Africa's energy sector, state-owned power utility Eskom has been given the go-ahead to develop two substantial solar photovoltaic (PV) generation facilities.

Does Eskom have a solar plant in South Africa?

Eskom has obtained licences for new solar PV facilities in South Africa, marking significant progress in renewable energy efforts to address the country's energy crisis. Read about the Sere and Lethabo solar plants' capacity and the impact on the national grid.

Can South Africa localise energy & car production?

South Africa has a history of ambitious strategies to localise production in energy and car manufacturing. They struggled to get off the ground. These plans were often undermined by delays and mismatched approaches by government departments.
