Sunroom photovoltaic roof surrounded by solar panels

Overview

Does Project Sunroof have solar data?

We currently have solar data for portions of 50 states and Washington DC. See if we've got you covered. Project Sunroof is a solar calculator from Google that helps you map your roof's solar savings potential. Learn more, get an estimate and connect with providers.

What is a photovoltaic roof mounted solar panel?

The photovoltaic (PV) roof mounted solar panels are located above concrete roof tiles with an external fire exposure classification of Broof (t4) and a reaction to fire classification A1 (non-combustible) which satisfies the low vulnerability criteria contained in Technical Handbook Annex 2.C for a roof covering not more than 6m from of a boundary.

Can a solar full roof fit a sloped roof?

Absolutely, if your roof is sloped with a minimum pitch of 18 degrees. The Solar Full Roof is designed to integrate seamlessly with various architectural styles. Whether you're looking for a complete solar roof or a blend of solar panels with your existing roofing material, our system can be tailored to fit.

What is solar full roof?

Embrace the synergy of style and sustainability with Solar Full Roof, a 2in1 integrated solar roof. Seamlessly integrating advanced solar technology into the architecture of your home, this solution transcends conventional rooftop installations.

How to choose a solar full roof?

The Solar Full Roof is suitable for sloped roofs with a minimum pitch of 18 degrees to ensure water-tightness. For the underlayment, choose one that can withstand temperatures up to 120°C as a safety measure.

Why should you choose solar full roof?

One of the Solar Full Roof standout features is its minimal maintenance requirement. Unlike traditional rooftop solar solutions, where moss, fallen leaves, and debris can accumulate between the roof and solar layers, our integrated design significantly reduces such issues.
