

## SolarMax Energy Systems

# Supply situation of photovoltaic power station energy storage manufacturers

## Overview

---

The module supply chain includes polysilicon, ingots, wafers, photovoltaic (PV) cells, modules, glass, backsheets, PV wire, encapsulants and more. In the PV module supply chain, it can take years to build n.

What is the solar photovoltaics supply chain review?

The Solar Photovoltaics Supply Chain Review, produced by the DOE Solar Energy Technologies Office with support from the National Renewable Energy Laboratory, will help the federal government to build more secure and diverse U.S. energy supply chains.

What is the supply chain for solar PV?

The supply chain for solar PV has two branches in the United States: crystalline silicon (c-Si) PV, which made up 84% of the U.S. market in 2020, and cadmium telluride (CdTe) thin film PV, which made up the remaining 16%. The supply chain for c-Si PV starts with the refining of high-purity polysilicon.

How many dumping and import taxes are imposed on solar PV?

Since 2011, the number of antidumping, countervailing and import duties levied against parts of the solar PV supply chain has increased from just 1 import tax to 16 duties and import taxes, with 8 additional policies under consideration. Altogether, these measures cover 15% of global demand outside of China.

How has China shaped the global supply and demand of solar PV?

Government policies in China have shaped the global supply, demand and price of solar PV over the last decade. Chinese industrial policies focusing on solar PV as a strategic sector and on growing domestic demand have enabled economies of scale and supported continuous innovation throughout the supply chain.

Can America reestablish a robust solar manufacturing supply chain?

The assessment concludes that, with significant financial support and

incentives from the U.S. government as well as strategic actions focused on workforce, manufacturing, human rights, and trade, America could reestablish a robust domestic solar manufacturing supply chain and become a competitive leader in a global solar industry.

Why is low-cost electricity important for solar PV supply chain?

Low-cost electricity is key for the competitiveness of the main pillars of the solar PV supply chain. The diversification of highly concentrated polysilicon, ingot and wafer manufacturing would provide security-of-supply benefits. Electricity accounts for over 40% of production costs for polysilicon and nearly 20% for ingots and wafers.
