

SolarMax Energy Systems

Taipei Energy Storage and New Energy Investment Plan

Overview

What is Taiwan's energy storage policy?

Taiwan's power grid system is an independent power grid. To cope with the impact of renewable energy integration in the future, there is a demand for energy storage systems. The government's policies on energy storage can be summarized as follows: (1) Solving the problem of intermittent renewable energy grid connection.

What are the future prospects for Taiwan's energy storage industry?

Future prospects Taiwan's energy storage industry is currently in its infancy and is mainly being developed and dominated by the Taiwan Power Company (Taipower), the Chinese Petroleum Corporation, Taiwan (CPC Taiwan). Taipower expects to complete a 590 MW energy storage system installation by 2025.

How does Taiwan promote the energy storage industry?

The promotion of the energy storage industry by the Taiwan government: Including regulations and policies. Energy storage systems can increase peak power supply, reduce standby capacity, and have other multiple benefits along with the function of peak shaving and valley filling.

Does Taiwan have a demand for energy storage systems?

Taiwan has a demand for energy storage systems, electric vehicles, and industrial development. Taiwan's foundation in the energy storage industry is in the field of battery technology, but it is difficult to compete with international manufacturers in terms of costs.

Why are stable energy storage solutions important in Taiwan?

As Taiwan's renewable energy share continues to grow, stable energy storage solutions are becoming increasingly vital to offset fluctuations in solar and wind power generation.

What is energy storage equipment in Taiwan?

Taiwan revised its “Renewable Energy Development Act” on May 1, 2019, and Article 3, paragraph 1, Subparagraph 14 of the Act clearly defines energy storage equipment as a means of storage for power which also stabilizes the power system, including the energy storage components, the power conversion, and power management system.

Taipei Energy Storage and New Energy Investment Plan

04 Power Systems & Energy Storage

The combination of PV energy and ESS promotes the effective use of feeders, expands the installation of photoelectricity, and provides power consumption during peak hours at night.
