

SolarMax Energy Systems

Tajikistan Industrial Park Energy Storage Investment

Overview

How can Tajikistan improve its energy system resilience?

Tajikistan seeks to enhance its energy system resilience by reconnecting to the United Energy System of Central Asia. This effort is supported by large infrastructure projects of common interests, such as CASA-1000 and the Rogun Hydropower Plant Project.

Why is Tajikistan focusing on coal sector development?

Utilising Tajikistan's unexploited natural resources to meet energy security concerns and aiding the country's industrial development are the main drivers for the country's focus on coal sector development. The Strategy 2030 sets ambitious targets for coal production, reaching 10.4 Mt to 15.1 Mt by 2030.

Why is electricity important in Tajikistan?

Electricity is an integral part of Tajikistan's economy, and providing a clean, affordable and secure supply of electricity has been of paramount importance for the government since independence. Despite its energy potential, Tajikistan's energy sector is susceptible to supply shocks.

Does Tajikistan have a mining industry?

Despite its vast mineral resources, many are not mined or are mined primitively. However, as future demand for critical raw materials increases amidst developments in the global energy transition, Tajikistan's mining industry holds much untapped potential. Coal currently significantly contributes to Tajikistan's energy mix.

Does Tajikistan have a good energy infrastructure?

While Tajikistan has been successful in providing universal access to electricity, the existing systems of its energy infrastructure function inefficiently. The large majority of hydro plants were built in the Soviet era and are ageing and require rehabilitation.

What are the challenges facing Tajikistan's energy sector?

Specific challenges facing Tajikistan's energy sector include the isolation of its energy supply system from those of other Central Asian countries, resulting in seasonal electricity deficiency and limited energy export potential, which has destabilised the country's energy and economic security.
