# Testing 5G base stations

## Overview

---

What tests are performed during 5G measurements?

The following tests are generally performed during 5G measurements: Figure 1: Equipments available from Keysight Technologies for 5G measurements. References: Explore 5G measurements for User Equipment (UE) and Base Stations (BS), covering transmitter and receiver test scenarios, conformance, and network stability.

What are 5G base station manufacturing & design verification test solutions?

5G Base Station Manufacturing & Design Verification Test Solutions that offer the lowest nnWave Cost-of-test and smallest industry footprint.

What instruments are needed to test 5G networks?

Instruments for Accurate EIRP A handheld spectrum analyzer with sufficient bandwidth to accurately measure signals occupying 100 MHz or more, as well as enough sensitivity and low noise floor to record EIRP at realistic distances from an active base station, is necessary to test 5G networks.

Do I need to make RF measurements before a 5G base station?

It is recommended that these measurements be made before the base station is connected to the antenna system. Figure 1: The Field Master Pro MS2090A has built-in measurements to test RF cables. Many 5G base stations do not have an RF test port. For this reason, over-the-air (OTA) measurements must be made.

How to use Python for 5G NR base station transmitter tests?

The provided Example\_Tx\_tests.py file shows the usage of this Python library for 5G NR base station transmitter tests. By pressing the shortcut Ctrl + Q the quick documentation can be displayed. This then shows a short description about the corresponding parameter or function. Every implemented test case class provides a csv-export function.

What is a 5G base station?

In a traditional distributed RAN (D-RAN) deployment, a 5G base station — called a gNodeB (gNB) — is a logical subsystem consisting of these components colocated on each cell tower: Advanced antenna system (AAS): These are the antennas that receive the modulated analog radio signals from user equipment (UE) like smartphones and IoT sensors.
