

SolarMax Energy Systems

Thailand 2025 Energy Storage Power Station Project

Overview

Does Thailand need a battery energy storage system?

Thailand may lack the Battery Energy Storage Systems (BESS) necessary to navigate supply and demand challenges. The 2024 PDP draft included 10,000 MW of BESS, but this may see the country struggle to fulfil carbon neutrality and Net Zero commitments over the coming decades.

What is a wind power project in Thailand?

The project will be the first private sector project in Thailand to integrate utility-scale wind power generation with battery energy storage and will have an important demonstration effect.

Does Thailand have a plan for renewable-plus-storage in 2023?

In April 2023, Thailand awarded project rights for 1GW of solar capacity paired with one-to-four-hour storage. However, only 0.3GW has been commissioned to date. While the draft PDP2024 has ambitious battery capacity targets, Thailand has not clarified the mechanism to support deployment of renewable-plus-storage.

How many mw can a solar generator store in Thailand?

Their total combined storage capacity was 994 MW. Interestingly, this allowed generators to sign semi-firm power purchase agreements (PPAs) with the Electricity Generating Authority of Thailand (EGAT) with minimum availability guarantees. Many solar projects in Thailand have non-firm PPAs in place due to a lack of storage on site.

What is Thailand's energy policy for 2025?

In addition, Thailand's energy policy for 2025 includes efforts to secure new domestic energy sources. This will involve opening up exploration and production rights for onshore petroleum fields in the 25th round, expected to yield approximately 5.76 million barrels of crude oil and 20.7 trillion cubic feet

of natural gas.

How will Thailand's energy policy affect the energy sector?

As Thailand plans to add significant amount of renewables capacity in the next 13 years, the government would consider more flexible gas power contract. As a result, thermal power plants will likely see their operational hours cut further. This will lead to costlier coal and gas power. Source: BloombergNEF.
