

SolarMax Energy Systems

**The battery cabinet is
connected to three-phase
power**

Overview

How many battery cabinets can be connected in parallel?

Up to two battery cabinets may be connected in parallel to the UPS. To connect two battery cabinets to the UPS, connect the first battery cabinet to the UPS as shown in the illustration above. Connect cabinet 2 CN14A to cabinet 1 CN24. The battery cabinets ship with six-foot long connection cables.

How do I connect a battery cabinet to a UPS?

This connection is made from CN14A of the battery cabinet to CN14 of the UPS (and CN14A of battery cabinet 2 to CN24 of battery cabinet 1 if paralleling cabinets). NOTE: Without this connection the battery cabinet will not be able to charge its batteries.

Does a battery cabinet need a DC breaker?

No other battery cabinet connection is needed. Pressing the EPO will cause the breaker on the battery cabinet and the UPS, to switch to the OFF position simultaneously, disabling both the battery cabinet and the UPS. The DC breaker on the battery cabinet is provided with a shunt trip.

What is a Legrand Battery Cabinet?

Universal battery cabinets for all three-phase Legrand UPS from 10kVA up to 800kVA power range. The Battery cabinet is designed to house standard VRLA Batteries of capacity range from 24Ah to 105Ah (C10).

What happens if I don't connect my UPS Battery Cabinet?

NOTE: Without this connection the battery cabinet will not be able to charge its batteries. Toshiba's 1600XPi Series of UPS battery cabinets have been designed to provide years of trouble-free operation requiring a minimum of preventive maintenance.

How many connectors does a battery cabinet have?

The three battery cabinet connector cables (battery positive, battery negative, and battery charger) are each equipped with individually keyed Anderson connectors to prevent cross connecting the battery cabinet and UPS circuitry. The battery cabinet connector cables are six (6) foot in length. The Battery Cabinet does not have an EPO.
