

SolarMax Energy Systems

**The inverter has the function of
self-grid connection**

Overview

Synchronous inverters only operate with the grid and so are also called “grid-following” inverters. For safety reasons, they turn off when the grid goes down to prevent electricity from back-feeding through power lines that might have repair workers servicing them.

The inverter has the function of self-grid connection

On Grid Inverter: Basics, Working Principle and Function

Unlike off-grid inverters, which operate independently from the grid and require battery storage, grid on inverters work in conjunction with the grid.

How Does a Solar Inverter Synchronize with Grid? Tips Inside

Solar inverters sync your solar system with the grid by matching voltage, frequency, and phase. Modern inverters monitor grid conditions in real-time for safe power export.

[Get a quote](#)

What is the difference between off-grid inverters, grid ...

Off-grid inverters allow users to create a self-sufficient energy supply independent of the grid and are particularly suitable for remote areas or ...
