The main energy storage voltage of lithium iron phosphate battery

Overview

Why is voltage chart important for lithium ion phosphate (LiFePO₄) batteries?

Voltage chart is critical in determining the performance, energy density, capacity, and durability of Lithium-ion phosphate (LiFePO₄) batteries. Remember to factor in SOC for accurate reading and interpretation of voltage. However, please abide by all safety precautions when dealing with all kinds of batteries and electrical connections.

How much power does a lithium iron phosphate battery have?

Lithium iron phosphate modules, each 700 Ah, 3.25 V. Two modules are wired in parallel to create a single 3.25 V 1400 Ah battery pack with a capacity of 4.55 kWh. Volumetric energy density = 220 Wh / L (790 kJ/L) Gravimetric energy density > 90 Wh/kg (> 320 J/g). Up to 160 Wh/kg (580 J/g).

What is a lithium iron phosphate (LiFePO₄) battery?

Lithium Iron Phosphate (LiFePO₄) batteries are recognized for their high safety standards, excellent temperature resistance, fast discharge rates, and long lifespan. These high-capacity batteries effectively store energy and power a variety of devices across different environments.

What is the voltage of a lithium phosphate battery?

Every lithium iron phosphate battery has a nominal voltage of 3.2V, with a charging voltage of 3.65V. The discharge cut-down voltage of LiFePO₄ cells is 2.0V. Here is a 3.2V battery voltage chart. Thanks to its enhanced safety features, the 12V is the ideal voltage for home solar systems.

What is the battery capacity of a lithium phosphate module?

Multiple lithium iron phosphate modules are wired in series and parallel to create a 2800 Ah 52 V battery module. Total battery capacity is 145.6 kWh. Note the large, solid tinned copper busbar connecting the modules together. This busbar is rated for 700 amps DC to accommodate the high currents

generated in this 48 volt DC system.

What is the nominal voltage of a LiFePO₄ battery?

The nominal voltage of a LiFePO₄ cell is 3.2V. These cells are considered fully discharged at 2.5V and fully charged at 3.65V. Note that these values may vary based on the specific cell specifications. What is the minimum voltage that can damage a LiFePO₄ battery?

The minimum voltage threshold for 12V LiFePO₄ batteries is around 10V.
