

## SolarMax Energy Systems

**The photovoltaic inverter can  
be placed horizontally**

## Overview

---

The inverter should be installed vertically. It is strictly prohibited to install horizontally or upside down. The PV inverter must be placed in a space with air circulation. The inverter is divided into forced air cooling and natural heat dissipation. Can a solar inverter be installed outside?

The placement of a solar inverter can impact its energy output by up to 25%. Solar inverters can be installed indoors or outdoors, but a shaded, well-ventilated spot is always recommended. Factors like cable distance, environmental conditions, safety, and accessibility should be considered when choosing the inverter location.

How to choose a solar inverter?

How far the inverter is from the solar panels is crucial, too. Long cable runs can mean less power getting through. This makes the whole system less efficient. You should keep the cables short but still make the inverter easy to get to. This is key for the solar power system to work its best.

Should solar panels be vertical or horizontal?

Vertical panels can catch more wind, potentially requiring stronger and more expensive mounting systems to ensure stability. Another way to place solar panels is by using horizontal installation. Many people are familiar with this orientation since it's often how solar panels are depicted across various media.

Where should a solar inverter be placed?

You can place your solar inverter in various spots, each with its benefits. Putting it on an outdoor wall means it's easy to get to and safe from the weather. But, think about shade and how well it breathes. For instance, a carport can keep the inverter cool and dry while being near the electrical panel.

Should you install photovoltaic modules vertically or horizontally?

Installing photovoltaic modules or PV is one of the best solutions to combat the rising cost of power. However, one of the main challenges for homeowners is deciding whether to mount PV modules vertically or horizontally. Both orientation has benefits that you won't find in the other.

How does a solar inverter work?

Your solar inverter is like the heart of your solar system. It changes the direct current (DC) from your panels into the alternating current (AC) your home uses. Figuring out where to put your solar inverter is vital. It affects how well your system runs in the long run.

## The photovoltaic inverter can be placed horizontally

---

### SG320HX/ SG350HXPVGrid-Connected ...

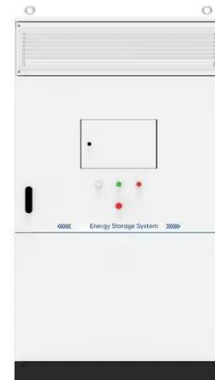

When there are multiple inverters in the PV system, connect grounding points of all inverters and the PV array frames to the equipotential cable (according to the onsite conditions) to im ...
