The total voltage of the base station battery pack is too high

Overview

Why is my battery bank too high?

Too high a voltage in a battery bank is either due to an improper setting in the charge controller or in the inverter's charger. Depending on your battery type, it will be necessary to have digital voltmeter available to measure voltage at the charge controller, the battery and the inverter terminals.

What is the difference between a BMS and a total pack voltage sensor?

In the context of a battery system, a Battery Management System (BMS) manages, protects, and balances the battery pack. A total pack voltage sensor is a component within the BMS that provides the system with a measurement of the total voltage of the battery pack.

What is a total pack voltage sensor in a BMS?

In the context of a BMS, a total pack voltage sensor is used to provide the BMS with a measurement of the total voltage of the battery pack. In versions of the firmware 2.6.5 and prior, the voltage measured by the total pack voltage sensor is used for enforcing the minimum and maximum pack voltage limits.

How is the pack voltage determined?

The pack voltage can be determined by calculating it from the individual cell voltages rather than measured by the total pack voltage sensor. The BMS can be set up to ignore any difference in voltage between the two methods.

Why does the total pack voltage sensor calibration drift?

The total pack voltage sensor in an Orion BMS may drift and produce voltage readings that are higher or lower than the actual pack voltage over time in some situations. This issue only occurs when the BMS is used in applications with certain types of electrical transients.

How do I fix a pack voltage mismatch issue?

To fix a pack voltage mismatch fault condition in Orion BMS, go to the “Fault Settings” tab and select the line that says ‘Ignore pack voltage mismatch fault condition’. After changing these settings, upload the profile to the BMS. This should eliminate issues caused by total pack voltage sensor calibration drift.
