## Overview

---

Can a battery storage plant be built in Greece?

An increasing number of local and foreign companies are interested in building energy storage facilities in sun-loving Greece using battery technology. In fact, the Regulatory Authority for Energy (RAE) has been receiving applications for permits concerning battery storage plants.

Does Greece have a zero-subsidy battery system?

The much-awaited ministerial decree for zero-subsidy standalone battery systems has been published in Greece. So far, Greece has provided support to 900 MW of standalone storage projects under three previous auctions.

Should Greece invest in energy storage facilities?

Currently there is a growing interest for investments in storage facilities in Greece. Licensed projects mostly consist of Li-ion battery energy storage systems (BESS), either stand-alone or integrated in PVs, as well as PHS facilities .

How long should energy storage be in a Greek power system?

Considering the energy arbitrage and flexibility needs of the Greek power system, a mix of short (~2 MWh/MW) and longer (>6 MWh/MW) duration storages has been identified as optimal. In the short run, storage is primarily needed for balancing services and to a smaller degree for limited energy arbitrage.

Which companies have a 400 MW battery capacity?

Other companies include Magna Victoria, Melven, Mars BESS and MS Komotini, which have already received permits for a combined 400 MW of battery capacity in various large projects. MS Komotini is one of seven subsidiaries of Motor Oil that have submitted applications for over 300 MW of storage.

Are battery storage plants getting a license?

In fact, the Regulatory Authority for Energy (RAE) has been receiving applications for permits concerning battery storage plants. In total, Balkan Green Energy News reported, applications to RAE reached 1.6 GW during October's licensing cycle. This is on top of projects with 23.5 GW in total that were already submitted by over 300 companies.
