Togo communication base station power operation

Overview

Private media in Togo have proliferated, with dozens of commercial and community radios and a handful of private TV stations in operation. Radio is the most popular medium, particularly in rural areas.

: state-owned radio network with multiple stations; several dozen private radio stations and a few community radio stations; transmissions of multiple international broadcasters are available (2007).

: +228: 00Main lines: • 225,000.

: • 278,442 users, 144th in the world; 4.0% of the population, 191st in the world (2012); • 356,300 users, 123rd in the world (2009).

What telecommunications are available in Togo?

Telecommunications in Togo include radio, television, fixed and mobile telephones, and the Internet. Radio stations: state-owned radio network with multiple stations; several dozen private radio stations and a few community radio stations; transmissions of multiple international broadcasters are available (2007).

How many TV stations are there in Togo?

Television stations: two state-owned TV stations with multiple transmission sites; 5 private TV stations broadcast locally; cable TV service is available (2007). Private media in Togo have proliferated, with dozens of commercial and community radios and a handful of private TV stations in operation.

What is the media like in Togo?

Private media in Togo have proliferated, with dozens of commercial and community radios and a handful of private TV stations in operation. Radio is the most popular medium, particularly in rural areas. The main TV station is the government-owned Television Togolaise.

What are the components of a base station?

Power Supply: The power source provides the electrical energy to base station elements. It often features auxiliary power supply mechanisms that guarantee operation in case of lost or interrupted electricity, during blackouts. **Baseband Processor:** The baseband processor is responsible for the processing of the digital signals.

What is the impact of base stations?

The impact of the Base Stations comes from the combination of the power consumption of the equipment itself (up to 1500 Watts for a nowadays macro base station) multiplied by the number of deployed sites in a commercial network (e.g. more than 12000 in UK for a single operator).

How does a base station work?

It usually connects the device to other networks or devices through a dedicated high bandwidth wire of fiber optic connection. Base stations typically have a transceiver, capable of sending and receiving wireless signals; Otherwise if they only send the trailer it will be considered a transmitter or broadcast point only.

Togo communication base station power operation

Energy-Efficient Base Stations , part of Green Communications

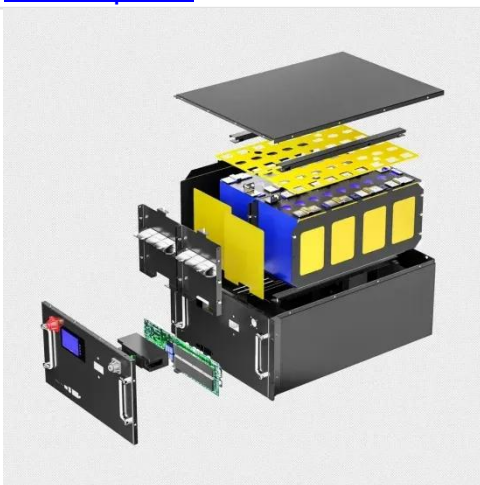

This chapter aims at providing a survey on the Base Stations functions and architectures, their energy consumption at component level, their possible improvements and the major problems ...
