

SolarMax Energy Systems

Uzbekistan Communications BESS Power Station Project

Overview

What is Bess project in Uzbekistan?

The project involves a 500 megawatt alternating current (MWac) solar photovoltaic (PV) plant, 668 megawatt hour (MWh) battery energy storage system (BESS), transmission line and other auxiliary infrastructure and will be one of the first utility-scale renewable energy projects with BESS component in Uzbekistan.

Where is Bess project located in Tashkent?

The PV plant and the BESS facility are situated 3.5 km apart, within Yuqorichirchik District and Parkent District respectively. Both districts are located within Tashkent Region. The overall project location lies about 20 km from Tashkent City.

How many employees does Bess project have?

On the BESS site, an on-site diesel generator will be used for power generation. The Project Company established for the project implementation currently employs a total of 23 employees, 11 of whom are Uzbekistan nationals. The EPC Contractor appointed for projection construction works is China Energy Engineering Corporation (CEEC).

What is a Bess project?

The project aims to expand clean and reliable electricity access to approximately 75,000 households. The project marks Central Asia's first renewable energy initiative with an integrated BESS component.

What is a power purchase agreement between Uzbekistan & national electric grid?

As part of the agreement, it will sell electricity to the state-owned National Electric Grid of Uzbekistan JSC under a 25-year Power Purchase Agreement for the project, including a 10-year operating term for the BESS component,

signed by these two entities.

What does a Bess facility do?

The BESS facility will serve the following main functions: Storage of electrical energy from power sources feeding into the project-associated utility grid during off-peak grid time, and the dispatch of the operating reserves in the event of grid congestion (i.e., instances of power demand exceeding power supply).
