

SolarMax Energy Systems

Walk-in container energy storage assembly process

Overview

What are the challenges in designing a battery energy storage system container?

The key challenges in designing the battery energy storage system container included: Weight Reduction: The container design had to be lightweight yet strong enough to withstand operational stresses like shocks and seismic forces, ensuring the batteries were protected during transport and deployment.

How do I integrate an efficient HVAC system into the container design?

We integrated an efficient HVAC system into the container design by: Incorporating two AC chillers to cool the battery area, regulating the temperature inside the container. Installing two mounted fans on top of the transformer block to circulate the air and ensure efficient heat dissipation.

How does a container design help reduce operational downtime & maintenance?

The design helped the client reduce operational downtime and maintenance efforts. The container met all relevant international standards, including ISO 1496-1, ISO 668 and IP54 Rating, giving client peace of mind and reducing operational risks.
